DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Regarding claim 6, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention.

See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1,6,7,11-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wellenegger et al. (US 66,775,254).

Regarding claim 1, Wellenegger teaches a radio communication method whereby a communication terminal apparatus sets a TFC (Transport Format Combination) pointer based on an up/down/keep signal from a radio base station apparatus, and performs uplink transmission based on a TFC indicating a transmission rate not exceeding this

Art Unit: 2618

TFC pointer (see fig.3; col. 5, lines 15-61. In this case, the power adjustment either up or down to achieve desired level obviously leads to transmission rate adjustment since the transmit power and the transmission rate are proportionally changed, therefore this teaching of Wellenegger reads on the "transmission rate not exceeding" of the present invention); wherein TFC pointers of a communication terminal apparatus and radio base station apparatus are made to match using a TFCI (Transmit Format Combination Indicator) transmitted from said communication terminal apparatus (see fig.3; col. 5, lines 15-61). In addition, since the system of Wellenegger is a W-CDMA standard (i.e. the downlink and uplink channel format should be the same and therefore once the remote terminal adjusted its power according to the order of the base station, the uplink channel format from the remote terminal will have the updated power adjustment to match with the power of the base station.

Regarding claim 6, the rejection of claim 1 is herein incorporated.

Regarding claim 7, the rejection of claim 1 is herein incorporated. In addition, since the channel format of Wellenegger includes TFCI, it is obvious that the system of Wellenegger must have a TFCI extraction to extracts TFCI transmitted from the remote terminal.

Regarding claims 11-13, the rejections of claims 1 and 7 are herein incorporated.

Allowable Subject Matter

5. Claims 2-5,8-10,14,15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
